## Commentary on Operations

### Tambomayo:

- Gold, lead and zinc production exceeded 2Q24 projections due to a positive reconciliation of gold, lead and zinc grades relative to the mid-term production program, partially offset by decreased silver production. Full year 2024 lead and zinc guidance has therefore been updated. 2024 gold guidance remains unchanged.

### Orcopampa:

- 2Q24 gold production was in line with expectations. 2024 guidance remains unchanged.

### Coimolache:

- 2Q24 gold production was in line with expectations. 2024 guidance remains unchanged.
- Coimolache's third Environmental Impact Assessment was approved by Peru's National Service of Environmental Certification for Sustainable Investments (SENACE) on May 31, 2024. This permit enables Buenaventura to file for the relevant construction permit to increase leach pad capacity at Coimolache.

### Julcani:

- Silver and lead production was in line with expectations for 2Q24. 2024 guidance remains unchanged.

### Uchucchacua:

- Silver production was in line with expectations for 2Q24.
- Lead and zinc production exceeded 2Q24 projections due to a positive ore grade reconciliation. 2024 guidance remains unchanged.
- Uchucchacua daily throughput increased to an average 1,200 TPD during the 6M24, aligned with the Company's targeted 1,500 TPD by year end 2024.

**Yumpag:**

- Silver production exceeded 2Q24 projections as ore processing was initiated earlier than expected, in March 2024, due to operating permit approval which was initially expected in May 2024. 2024 guidance has therefore been updated.

**El Brocal:**

- Copper and silver production was below expectations for 2Q24 due to a decrease in volume processed during the quarter resulting from a 16 day voluntary temporary suspension of El Brocal's processing plant facilities, as was announced by the Company on May 22, 2024.
- Buenaventura announced that ore treatment operations at its El Brocal processing plant resumed operations at midnight on June 7, 2024. El Brocal had accumulated approximately 220,000 tonnes of copper ore upon the plant's reinitiation. The processing of said stockpiled inventories, combined with production from the mine, will gradually ramp to a processing rate of 15,000 tons per day, leveraging the two plants' previously idle capacity. El Brocal is expected to achieve its nine month 2024 copper production target by September 2024. Full year 2024 copper guidance therefore remains unchanged.
- The Company's target to achieve a 11,000 TPD underground mining rate by year end 2024 remains unchanged.
- Open pit ore inventories were fully processed by the end of 1Q24. Lead and zinc production is not expected until the open pit resumes operation. The Company temporarily suspended mining activities at the open pit mine for up to three years, as was previously announced on October 3, 2023. 2024 zinc guidance has therefore been updated.
