CAUTIONARY STATEMENT

This presentation contains certain information that may constitute forward-looking information under applicable U.S. securities legislation, including but not limited to information about costs applicable to sales, general and administrative expenses; production volumes; current expectations on the timing, extent and success of exploration; development and metallurgical sampling activities, the timing and success of mining operations and the optimization of mine plans. This forward-looking information entails various risks and uncertainties that are based on current expectations, and actual results may differ materially from those contained within said information. These uncertainties and risks include, but are not limited to, the strength of the global economy, the price of commodities; operational, funding and liquidity risks; the degree to which mineral resource estimates are reflective of actual mineral resources; the degree to which factors which would make a mineral deposit commercially viable are present, and other risks and hazards associated with mining operations. Risks and uncertainties about the Company's business are more fully discussed in the BVN's form 20-F filed with the Securities and Exchange Commission in the U.S. and available at www.sec.gov . Readers are urged to read these materials. Buenaventura assumes no obligation to update any forward-looking information or to update the reasons why actual results could differ from such information unless required by law.

■ Growth

- Tambomayo investment will conclude in 2016. The project is in-line with budget.
- Sustaining Capex will be maintained below \$100 M.

- At San Gabriel explorations will continue in order to confirm resources and certainty.
- Marcapunta will become an open pit in order to reduce costs.

OPERATING STRATEGY

Continue reducing costs

Tambomayo will start production in 4Q16

Production to increase in direct operations in 2017
